Guidelines for Implementation of SimpleAssessment
8th Grade Technology Literacy Assessment

SimpleK12 assessment is delivered from our web servers to your network. Your student's online web assessment scores are recorded. Because of this there will be some changes that you may need to implement in order for this assessment to work properly within your network structure.

For Your Network:

If you use a **proxy server**, perform **load balancing** or perform network **filtering** please exempt this IP address range**. 64.132.127.186 - 64.132.127.190**

Without this the end user could have a bad experience with assessment scores not being recorded, possible browser lock up and being kicked out of the Learning Management System.

For Your End User Computers:

If you **prevent cookies** from being written to the local hard drive you will need to trust the web address of your new training site or the above IP address range.

We need this because we write a session variable to the local drive that controls the number of logins per day which is 15. This prevents password abuse.

System Requirements for your end user computers include the below:

System Requirements
- Pentium III Class or higher CPU, 450mHz or faster   - Microsoft Windows or Mac OSX (Supported operating systems: Windows 98SE, Windows 2000, Windows Millenium, Windows XP, Windows Vista, Mac OSX 10.3↑)   256+ MB available RAM   1024 x 768 or greater resolution, 16-bit color or greater   - Internet Explorer v6.0↑ OR Firefox v1.5↑ OR Safari v3.1↑   - Internet connectivity with 56k modem or greater   - Flash Player (Version 9↑)

Possible End User Support Issues Include:
Pop Up Blocking - Trust the Training Site Web Address or IP Range
Display Size – Display should be 1024 by 768 – Do **Not** Magnify The Browser Page

Support Resolution:
Enter Support Ticket from LMS Admin Menu under Help
Email Support@HowToMaster.com
